

Editorial for Prosthodontic Web Based Supplement

Web-based journal supplements have become very popular. The second web based issue of Clinical Implant Dentistry and Related Research is devoted to prosthetically related articles. Implant dentistry is a rapidly changing field and it is hard to keep up with all aspects related to dental implants. This is a focused edition and will allow our readers to review what is new in dental implants and prosthodontics treatments. Christer Slotte reports on the use of 4 mm long implants for implant supported fixed partial dentures for severely resorbed posterior mandibles. Turkyilmaz and colleagues report on a seven year follow-up study on TiUnite implants supporting mandibular over dentures using either an

early or delayed approach. The management of peri-implant bone loss and our current understand of these potential problems are thoroughly discussed. Torsten Jemt explored the in vitro measurements of precision fit of implant-supported frameworks. This web based supplement should not be missed. We hope you enjoy it and we thank the authors for submitting such relevant papers.

Our best,

Lars Sennerby, DDS, MS, PhD
Bill Becker, DDS, MSD
