

## Impact factor

### EDITORIAL

---

Impact factor (IF) is an objective way of measuring the number of citations of an indexed scientific journal. Our journal's IF has increased even more since last year and has now reached up to 1.274 which is our highest IF ever and considered high for the field of Dentistry. Three years ago our IF was 0.7. This is an impressive increase indicating that we have a journal which is frequently

cited. It also somewhat reflects the scientific activity in the field of Dental Traumatology which has been increasing.
