Three-dimensional changes in the position of unopposed molars in adults

P. Christou and S. Kiliaridis

European Journal of Orthodontics (2007) **29**: 543–549

The graph in Figure 2 was incorrect. The correct figure is given below.

Figure 2 Vertical movement of the centroid. All the molars (unopposed and controls) showed signs of eruption (positive values indicate eruption, + indicates periodontally affected tooth). There was greater vertical displacement in periodontally affected unopposed molars.
