

Comparison of the pharmacokinetic profiles of two locally administered doxycycline gels in crevicular fluid and saliva

Kim, TS, Klimpel, H, Fiehn, W, Eickholz, P. *Journal of Clinical Periodontology* 2004; 31, 286–292. doi 10.1111/j.1600-051X.2004.00494.x

- (1) Throughout this publication the unit of measurement for doxycycline concentration in saliva should be ng/ml and not $\mu\text{g/ml}$ as given.
- (2) In the Discussion the sentence “This difference could explain the observation that we found a doxycycline concentration in saliva during the first 3 days after application that was 100–1000 times higher than in the study of Stoller et al.” should not have been included.
