

## Journal of Public Health Dentistry "Best Paper of the Year"

Presented by William R. Maas, DDS, MPH

In 2002, the American Association of Public Health Dentistry (AAPHD) established a competition to recognize the high quality of papers submitted to the *Journal of Public Health Dentistry* (JPHD), which has helped it maintain its reputation as one of the most influential journals in dentistry. The Editorial Board reviewed nominations from among all papers published in the 2001 volume of JPHD, and the first

"Best Paper Award was presented in Danvers, Massachusetts.

After a one-year hiatus in this program, a new corporate sponsor stepped forward to provide a financial grant to match the in-kind contributions of AAPHD, which include the considerable efforts undertaken by JPHD's Editorial Board in reviewing all papers published during the course of the previous year to select the one to be highlighted as the best of that

volume. Dentsply International is the new corporate sponsor of this award, enabling AAPHD to recognize the best papers published in the 2002 and 2003 volumes of JPHD at the annual awards luncheon on May 5, 2004.

The bibliographic citation of the best papers published in 2002 and 2003 are noted below, and the remarks made by the senior author in receiving the award follow.

### *Journal of Public Health Dentistry Best Paper of 2002*

Chavers LS, Gilbert GH, Shelton BJ

Racial and Socioeconomic Disparities in Oral Disadvantage, a Measure of Oral Health-related Quality of Life: 24-month Incidence

J Public Health Dent 2002;62(3):140-7

## Remarks on Receiving Best Paper of 2002 Award

Scott Chavers, MPH, PhD

I would like to express my deep appreciation for having the American Association of Public Health Dentistry select our paper "Racial and socioeconomic disparities in oral disadvantage, a measure of oral health-related quality of life: 24-month incidence" as the best paper published in the *Journal of Public Health Dentistry* in 2002. To have a paper selected for publication in JPHD is an honor in itself, but to have a paper chosen as Paper of the Year evokes both deep humility and heart-felt gratitude, given the outstanding quality and significance of the work published in JPHD.

I apologize for being unable to accept this prestigious award in person. I am especially disappointed by not being here in person because of my appreciation and respect for the impact that each of you within public health dentistry have made on the day-to-day quality of life and health of the public. I would also like to express my gratitude and appreciation for

Dr. Scott Chavers

those who stand in the front line, delivering dental services to those in greatest need.

One individual who stands on the front line is Dr. Gregg Gilbert. Gregg's

vision for the Florida Dental Care Study (FDCS) continues to produce significant insight into long-term changes in oral health outcomes and demand for specific dental services, as well as correlates of oral health outcomes and demand for dental services. The Florida Dental Care Study has produced over 60 research articles to date, and it was Gregg's guidance that formed the basis for the hypotheses we tested and the interpretation of our results. Gregg has assembled a multidisciplinary team at the University of Alabama-Birmingham (UAB) School of Dentistry to work on the FDCS. From the UAB School of Public Health, Gregg recruited Dr. Brent Shelton and me to work on biostatistical and epidemiologic issues encountered in the FDCS. It was truly the positive synergy of Gregg's guidance, Brent's ability to develop and apply complex biostatistical concepts, and my understanding of epidemiologic nuances in observational studies that

made our research successful.

Recognition from working in other health areas that oral health is a fundamental component of overall health and quality of life brought me into public health dentistry. As I have moved into studying other health areas, this fundamental component is

continually reinforced.

In closing, thank you again for this great honor. Thank you again for the truly important work that you do, and I hope that our paper will be prove to be beneficial to you in carrying out this important work.

*[Editor's Note: Dr. Chavers declined the \$1,000 prize associated with the award and asked that the funds be deposited in the AAPHD Foundation in honor of the faculty, staff, and students at the University of Alabama-Birmingham (UAB) School of Dentistry and the UAB School of Public Health.]*

*Journal of Public Health Dentistry Best Paper of 2003*

Beltrán-Aguilar E, Malvitz D, Lockwood S, Rozier G, Tomar S  
Oral Health Surveillance: Past, Present, and Future Challenges  
J Public Health Dent 2003;63(3):141-9

## Remarks on Receiving Best Paper of 2003 Award

### Eugenio Beltrán-Aguilar, DDS, DrPH

When I arrived at the US Centers for Disease Control and Prevention (CDC) in 1991, Larry Furman, who was preparing for reassignment and would provide his last service as our leader the following day, summarily instructed me that I "will" work in surveillance, a cornerstone in all CDC activities. At that time, I was the only person assigned to surveillance and soon it was clear to all of us, and by "us" I refer to Don Marianos and Dolores Malvitz, that we would not be able to promote surveillance among our constituents using the same tools we had been using for more than 60 years. CDC had very strong ideas and a good deal of experience on what surveillance for diseases and risk factors should be. We needed to learn the CDC blueprint and work on developing our own surveillance systems.

In our dealing with the issue and trying to balance what our constituents need and what our colleagues in academia say, it took us almost eight years to finalize the product that you have been kind to honor. And to say that it is the work of Beltrán and others

*Drs. R. Gary Rozier, Eugenio Beltrán-Aguilar, Dolores Malvitz, and Scott L. Tomar*

would be unfair. This is really the work of all of you who provided feedback, and especially the work of my coauthors, Dolores, Stuart, Scott, and Gary, who helped me to clarify my philosophical conundrums and correct my "Spanglish."

We visualized our paper as a document to generate discussion and, based on the showcasing of surveillance issues in meetings in the last two or three years, I think it is fulfilling that goal. Let's continue the discussion.

Thanks.
