Decision Tree for an Avulsed Tooth

Obtain a radiograph to verify position

- 2. Flexible splinting for 7 days is indicated. Additional splinting may be required with concomitant bone fracture.
- 3.
- Consideration should be given to antibiotic therapy and tetanus immunization. Use of a root surface preconditioning protocol may help delay/prevent the expected replacement resorption process. Holding the tooth by the crown, irrigate with sterile saline and gently replant with digital pressure. 4.
- 6. Use of a preconditioning protocol may enhance pulp revascularization.
