

Index

Note: Page numbers of article titles are in **boldface** type.

A

- Allogenic bone grafts, for periodontal regeneration, 640–641
- Alloplasts, for periodontal regeneration, 642–643
- Antibiotics, in periodontal disease, 618–622
- Antimicrobials, locally applied, 618–622
systemic, 622–623
- Antiseptics, periodontal disease and, 616–618
- Arestin, 621–622
- Atherosclerosis, periodontal disease associated with, 535–537
- Atridox, 620–621
- Autogenous bone grafts, for periodontal regeneration, 640

B

- B cells, and periodontitis, 506
- Bacterial cultures, in periodontal disease, 679–680
- Biofilm-associated bacteria, antimicrobial resistance and, 494
bacterial antigens and virulence factors in, 495
cell-cell communication in, 494
extracellular proteolytic enzymes and, 497
fimbriae in, 496–497
gene transfer in, 494
heat shock proteins and, 495–496
lipopolysaccharide, 495
regulation of gene expression in, 494
- Biomarkers, host response and inflammatory mediators as, 555–557
- Biotin, 600
- Bisphosphonates, in periodontal disease, 685–686

- Bone allograft, demineralized freeze-dried, for periodontal regeneration, 641–642
freeze-dried, for periodontal regeneration, 641
- Bone grafts, allogenic, in periodontal regeneration, 640–641
autogenous, in periodontal regeneration, 640
human mineralized, for periodontal regeneration, 642
replacement, for periodontal regeneration, 640–642
- Bone matrix, demineralized, Grafton, for periodontal regeneration, 642
- Bone morphogenetic proteins, for periodontal regeneration, 645
- Bone-specific markers, of tissue destruction, for periodontal diagnosis, 557–558

C

- Calcium, in body, 602, 605
- Carbohydrates, role in nutrition, 596–597
- Cardiovascular disease, periodontal disease associated with, 535–537
- Chewing stick, 608
- Chlorhexidine, 585, 617
- Chromium, functions of, 604
- Coenzyme Q₁₀, 607
- Collagen, type 1, pyridinoline cross-linked carboxyterminal telopeptide of, 558–560
- Copper, sources of, 604

D

- Demineralized freeze-dried bone allograft, for periodontal regeneration, 641–642
- Dental plaque. See *Plaque*.

- Diabetes mellitus, periodontitis in, treatment of, 546
- risk of periodontitis in, 545
- types of, 544

E

- Enamel matrix derivative(s), for periodontal regeneration, 646
- in periodontal disease, 684–685
- Enzymatic assays, in periodontal disease, 680

F

- Flaps, coronally positioned, for periodontal regeneration, 639–640
- Fluoride, dietary, 595
- functions of, 604
- Folate, 600
- Freeze-dried bone allograft, for periodontal regeneration, 641

G

- Gene polymorphisms, 527
- Gingiva, crevicular fluid sampling of, diagnostic test based on, 563
- recession of, 523–524
- Gingivitis, 518, 520
 - bacteria associated with, 499
 - development of, plaque accumulation and, 501
 - necrotizing ulcerative, 500
- Grafton demineralized bone matrix, for periodontal regeneration, 642
- Growth factors/cytokines, for periodontal regeneration, 645–646
- Guided cell repopulation/guided tissue regeneration, for periodontal regeneration, 644–645, 647–652

H

- Heart attack, periodontal disease and, 536
- Herbal supplements, periodontal disease prevention and, 607–608
- Human mineralized bone graft, for periodontal regeneration, 642

I

- Immunoassays, in periodontal disease, 680
- Infection(s), initiating periodontal disease, 611–612
- Inflammation, leading to tissue destruction, 665–666
- Interdental cleaning, 581–582
- Interleukin-1, in periodontal disease, 507
- Interleukin 10, in periodontal disease, 508
- Iodine, functions of, 603
- Iron, importance of, 603
- requirements for, 604
- Irrigation, supragingival oral, 586

L

- Lipids, role in nutrition, 597
- Lipopolysaccharide, from plaque biofilms, events triggered by, 554
- Lipopolysaccharide biofilm-associated bacteria, 495
- Lipoxins, in periodontal disease, 508
- Low birth weight, preterm, and periodontal disease, 542–544

M

- Macrophages, periodontitis and, 505
- Magnesium, source of, 603
- Manganese, 604
- Minerals, importance of, 601–607
 - major, 602–603
 - trace, 603–604
 - ultratrace, 604
- Miswak, 608
- Molybdenum, 604
- Mouthrinses, 582–585, 616–617

N

- Natural killer cells, periodontitis and, 505
- Neutrophils, periodontitis and, 504–505
- Niacin, 599
- Nucleic acid probes, in periodontal disease, 680–681
- Nutrients, major, 595
- recommended intake of, standards for, 596

Nutrition, periodontal disease and, **595–610**
 role of, in periodontal disease, 604–607

Nutritional supplements, periodontal
 disease prevention and, 607–608

O

Oral disease, and periodontal disease,
 diagnostic biomarkers of, **551–571**

Oral fluid biomarkers, future directions for
 use of, 562–563
 role of, in periodontal diagnosis,
 561–562

Osteocalcin, and periodontal disease,
 560–561

P

Pantothenic acid, 599

Pep-Gen p-15, for periodontal
 regeneration, 646

Peri-implant area, microbiology of, 664–665

Peri-implantitis, **661–676**
 and periodontitis, relationship of,
 666–667
 clinical appearance of, 669
 definition of, 661, 667
 histopathologic features of, 667–668
 incidence of, 661–662
 smoking and, 668
 soft tissue around implants and,
 662–663, 664
 treatment of, 669–673

Periochip, 618

Periodontal abscess, 500

Periodontal disease(s), age, gender, and
 socioeconomic status predisposing to,
 524–525
 analysis of disease activity in, 682–683
 and oral disease, diagnostic
 biomarkers of, **551–571**
 antimicrobial approach to, 614–623,
 686–687
 assessment of status of, 587, 589
 bacterial cultures in, 679–680
 biosensors in, 681–682
 dental plaque and, 492–493
 diagnosis of, 677–678
 microbial factors for, 553–555
 diagnostic criteria and measurement
 methods in, 518–519
 enzymatic assays in, 680
 epidemiologic studies of, goals of, 518
 epidemiology of, 520–524
 and risk factors for, **517–532**

etiologic factors for, and risk factors
 for, 524–527

etiology and pathogenesis of, **491–516**

focal infection hypothesis of, history
 of, 533–535

future treatment and diagnostic
 strategies for, **677–694**

genetic analysis in, 683

host modulatory approach to, 623–628

immunoassays in, 680

in atherosclerosis, cardiovascular
 disease, and stroke, 525–537

in smokers, management of, 689–690

infection initiating, 611–612

matrix degeneration in, inhibition of,
 688–689

microbiologic testing in, 678–682

microorganisms in, 525–526

nucleic acid probes in, 680–681

nutrition and, **595–610**

oral hygiene and, 526

polymerase chain reaction in, 681

predictors of, 552, 553

prevention of, **573–594**

risk assessment as aid in, 574–578

race/ethnicity and, 525

risk factors for, 612–614

risk reduction strategies, 615

smoking and, 526, 689–690

systemic effects of, **533–550**

treatment of, bisphosphonates in,
 685–686

diagnostic tests for, 631

enamel matrix derivatives in,
 684–685

nonsurgical approaches for,
611–636

periodontal regeneration
 techniques for, **637–659**,
 683–684

photodynamic therapy in,
 687–688

regenerative, **637–659**, 683–684

treatment algorithm for, 628–629

Periodontal Risk Calculator, 576

Periodontitis, and peri-implantitis,
 relationship of, 666–667
 and tooth loss, 663–664
 anti-inflammatory cytokines and lipid
 mediators in, 508
 B cells and, 506
 chronic, 520–523
 bacteria associated with, 499–500
 diabetes mellitus and, 545–546
 early-onset aggressive, 523
 generalized aggressive, 500
 genetic diseases associated with, 502
 localized aggressive, 500

- Periodontitis (*continued*)
 macrophages and, 505
 natural killer cells and, 505
 neutrophils and, 504–505
 pathogenesis of, 612
 host cells and molecules
 implicated in, 503–504
 prevention of, clinical considerations
 for, 586–589
 future strategies for, 589–590
 proinflammatory and lipid mediators
 in, 507–508
 recurrence of, patient risk for, 575–576
 risk assessment for, 613–614
 risk modification of, 614
 susceptibility to, 501–503
 T lymphocytes and, 500
- Periodontitis Index, 519
- Periodontium, biologic foundation of,
 638–639
 “compartmentalization” of, 638
 health of, and disease, bacterial species
 associated with, 497–499
 regeneration of, clinical applications
 of, 647–648
 definitions in, 637–638
 factors influencing, 646–647
 guided tissue regeneration
 technique of, 644–645,
 647–652
 root surface conditioning for, 639
 surgical principles for, 647–652
 techniques for, 639–646
- Phosphorus, sources of, 602–603
- Photodynamic therapy, in periodontal
 disease, 687–688
- Plaque, chemical control of, 582–586
 development of, as biofilm, 493–495
 mechanical control of, 579–582, 616
 periodontal disease and, 492–493
- Pneumonia, periodontal disease and,
 537–539
 prevention of, oral intervention trials
 for, 539–541
- Polymerase chain reaction, in periodontal
 disease, 681
- Potassium, functions of, 602
- Pregnancy, adverse outcomes of, and
 periodontal disease, 542–544
- Prostaglandins, in periodontal disease,
 507–508
- Protein(s), need for, 605
 role in nutrition, 596
- Pulmonary disease, chronic obstructive,
 periodontal disease and, 541–542
- Pyridinoline cross-linked carboxyterminal
 telopeptide of type I collagen, 558–560
-
- ## R
-
- Regeneration techniques, periodontal, for
 treatment of periodontal disease,
637–659
- Replacement bone grafts, in periodontal
 regeneration, 640–642
- Riboflavin (Vitamin B₂), 599
- Root surface conditioning, for periodontal
 regeneration, 639
-
- ## S
-
- Selenium, functions of, 604
- Smokers, periodontal disease in, 526,
 689–690
- Smoking, peri-implantitis and, 668
- Smoking cessation, pharmacotherapies
 approved for, 587, 588
- Sodium, functions of, 602
- Stroke, periodontal disease associated with,
 535–537
- Subantimicrobial-dose doxycycline
 (Periostat), 624, 625–628
- Sulfur, sources of, 603
- Supplements, herbal, periodontal disease
 prevention and, 607–608
 nutritional, periodontal disease
 prevention and, 607–608
- Systemic diseases, and periodontal disease,
 527, 534
-
- ## T
-
- T lymphocytes, periodontitis and, 506
- Thiamin (Vitamin B₁), 599
- Thromboxanes, in periodontal disease,
 507–508
- Tissue destruction, bone-specific markers
 of, for periodontal diagnosis, 557–558
- Tooth loss, periodontitis and, 663–664
- Tooth scaling, 616
- Toothbrushing, manual versus powered,
 579–581

Toothpaste, 585, 617–618

Trace minerals, 603–604

Triclosan, in toothpaste, 617–618

Tumor necrosis factor α , in periodontal disease, 507

V

Vitamin A, 597

excess of, 605–606

Vitamin B, 599

Vitamin B₆, 600

Vitamin B₁₂ (cyanocobalamin), 600

Vitamin C (ascorbic acid), 601
in periodontitis, 606–607

Vitamin D, 597–598

periodontal attachment and, 607

Vitamin E, 598

Vitamin K, 598–599

Vitamins, in nutrition, 597–601

W

Water, function of, 601

X

Xenografts, for periodontal regeneration,
643–644

Z

Zinc, importance of, 603
