

## Index

*Note:* Page numbers of article titles are in **boldface** type.

### A

Allografts, bone. See *Bone allograft(s)*.

Amelogenin, effects on odontoblast and osteoblast precursors, 289  
gene splice products implantation in exposed pulp, 289–293  
in enamel formation, 281

### B

Bioactive molecules, to stimulate repair and regeneration of teeth, **277–298**

Biomaterials, for bone tissue engineering, 206–209  
for periodontal regenerative medicine, 246  
used as scaffolds, 206–208

Bone, bordering implant, remodeling of, 233  
formation of, induction of, bone morphogenetic protein for, 212, 219  
from extraoral sites, for bone grafting, 217  
mechanotransduction in, 231  
stability of, and bone implants, biomechanical approaches for assessing, 239–240

Bone allograft(s), demineralized, applications of, 217  
osteinductivity of, growth factors to modify, **217–228**  
human demineralized freeze-dried, 219–220  
Bio-Oss and, 223–225  
effects on osteoinduction, 220–223  
role of resorption rate and, 223, 224

Bone graft products, for bone tissue engineering, 218

Bone grafting, allogeneic, in craniofacial bone tissue engineering, 176–181

Bone implants, and bone stability, biomechanical approaches for assessing, 239–240

Bone morphogenetic protein, for gene delivery, in gene therapy, 254–256  
to induce bone formation, 212, 219

Bone morphogenetic protein-7 (osteogenic protein-1) collagen implantation, in extracellular matrix molecules in dentin, 287–288

Bone morphogenetic proteins, biologic effects of growth factors and, 248  
in repair and regeneration of teeth, 281

Bone remodeling, effect of mechanical stresses on, 229–234  
immediate loading of implants and, 237–238  
movement of natural teeth by, 233  
stress-growth relationship and, 230–231

Bone sialoprotein/collagen implantation, in extracellular matrix molecules in dentin, 286–287

Bone tissue engineering, and reconstructive materials, in implant dentistry, **229–244**  
biomaterials for, 206–209  
bone graft products for, 218  
ceramics in, 206–207  
craniofacial. See *Craniofacial bone tissue engineering*.  
influence of dental materials on, 234–237, 241  
polymers in, 208, 209

### C

Calcium hydroxide, in repair and regeneration of teeth, 277, 279–280

Canonical osteoinductive material, for bone grafting, 219

Ceramics, in bone tissue engineering, 206–207

- Craniofacial bone tissue engineering, **175–190**  
 allogeneic bone grafting in, 175  
 cellular therapies in, 181–186  
   bioengineered scaffolds for, 184–186  
   cell-based approaches to, 181–184  
 distraction osteogenesis in, 176–181  
   mechanobiology and, 178–179  
   molecular biology and, 179–181  
 materials for, 175–176
- Craniofacial tissues, engineering of, in laboratory, **205–216**
- Craniomaxillofacial reconstructive procedures, donor site for, 205

## D

---

- Dental materials, influence on bone tissue engineering, 234–237, 241
- Dental prostheses, implant-borne, energy conservative versus energy dissipative behaviors of, 231–232  
 mechanical biocompatibility of, 233–234
- Dental stem cells, epithelial and mesenchymal, molecular profiling of, 198–199  
 postnatal, and scaffold interactions, 197–198  
   manipulation of, via cell-cell and cell-scaffold interactions, 199
- Dental tissue. See *Tooth (Teeth)*.
- Dental treatments, per year, in United States, 300
- Dentin, extracellular matrix molecules in, dentonin in, 289  
 extracellular matrix molecules in, 282–285  
   bone morphogenetic protein-7 (osteogenic protein-1)  
   collagen implantation in, 287–288  
   bone sialoprotein/collagen implantation in, 286–287  
 reparative formation of, in repair and regeneration of teeth, 280, 281  
 thickness of dental preparations, pulp healing in response to, 303
- Dentin bridge, reparative, 303–304  
 formation of, 305  
 pulp stem cells and, 304

- Dentinogenesis, reparative, 303–304  
 restorative treatments and, 301  
 tertiary, 301–303
- Dentonin, in extracellular matrix molecules in dentin, 289
- Distraction osteogenesis, in craniofacial bone tissue engineering, 176–181

## E

---

- Enamelysin, in enamel formation, 281
- Enamel, formation of, amelogenin in, 281  
 enamelysin in, 281
- Endodontic treatment, 300
- Endodontics, and dental implants, outlook for, **299–315**
- Extracellular matrix molecules, in dentin, 282–285  
   bone morphogenetic protein-7 (osteogenic protein-1)  
   collagen implantation in, 287–288  
   bone sialoprotein/collagen implantation in, 286–287  
   dentonin in, 289  
   in pulp, composition of, 282, 285  
   in repair and regeneration of teeth, 277–278, 282

## F

---

- Fibrodentin, globular, reparative dentin bridge and, 304

## G

---

- Gene therapeutics, for periodontal regenerative medicine, **245–263**
- Gene therapy, bone morphogenetic protein gene delivery, 254–256  
 for periodontal tissue engineering, 252–253  
 gene transfer in, 249–250  
 growth factor, for tissue engineering, evaluation of, 253  
 platelet-derived, gene delivery in, 253, 255  
 methods of, for periodontal regenerative medicine, 249–256  
 nonviral vectors in, 251  
 of salivary glands, **157–173**  
 targeted, in vivo, for periodontal regeneration, 256  
 viral vectors in, 250–251

Growth factor gene therapy. See *Gene therapy, growth factor*.

Growth factors, biologic effects of, bone morphogenetic proteins and, 248  
clinical applications of, in periodontal regeneration, 249  
platelet-derived, biologic effects of, in periodontal disease, 247–248  
to modify osteoinductivity of demineralized bone allografts, **217–228**  
used in periodontal regenerative medicine, 247–249

## H

Hepatocyte growth factor, as implant coating to promote angiogenesis, 211

Hydroxyapatite, as implant coating to enhance osseointegration, 210–211

## I

Implant dentistry, bone tissue engineering and reconstructive materials in, **229–244**

Implants, dental, and endodontics, outlook for, **299–315**  
failure of, causes of, 300–301  
immediate loading of, bone remodeling and, 237–238  
remodeling of bone bordering, 233  
success of, 300

## M

Mandible, reconstruction of defects of, with tissue-engineered bone, 208, 209

Mandibular condyle, formation of, by tissue engineering, 208, 209

Molar pulp, in vivo reparative processes in, 286

## O

Odontoblast progenitors, effects of amelogenin gene splice products on, 293

Odontoblasts, restorative treatments and, 301

Omental implant method, for bioengineered teeth, 193

Osteogenesis, distraction, in craniofacial bone tissue engineering, 176–181

Osteogenic materials, for bone grafting, 217–218

Osteoinductive materials, for bone grafting, 218–219

## P

Periodontal disease, biologic effects of platelet-derived growth factors in, 247–248  
etiology of, 245  
regeneration of periodontal disease and, 246

Periodontal regenerative medicine, biomaterials for, 246  
cell-based tissue engineering in, 268–269  
gene delivery-based tissue engineering in, 269–271  
gene therapeutics for, **245–263**  
gene therapy methods for, 249–256  
growth factors used in, 247–249  
effects of, 248  
protein-based tissue engineering in, 266–268  
tissue engineering in, 266–273

Periodontal tissue engineering, gene therapy for, 252–253

Periodontal tissues, regeneration of, clinical applications of growth factors in, 249

Periodontitis, incidence of, 265  
nanoscale science therapy for, 272  
rapid prototyping technology for, 272  
solid free-form fabrication for, 272  
tissue engineering therapy for, new developments in, **265–276**

Polymers, in bone tissue engineering, 208, 209

Protein, bone morphogenetic. See *Bone morphogenetic protein*.

Pulp, exposed, implantation of amelogenin gene splice products in, 289–293  
extracellular matrix molecules in, composition of, 282, 285  
healing in response to dentin thickness of dental preparations, 303  
molar, in vivo reparative processes in, 286  
regeneration of, after injury or infection, 299

Pulp-dentin complex of teeth, histology of, 302

- Pulp stem cells, adult, life cycle and activity of, 306  
 migration of, molecular regulation of, 306–307, 308  
 reparative dentin bridge and, 304  
 source of, 304–306

## R

- Radiation damage, and gene transfer to salivary glands following, 159–164
- Reconstructive materials, bone tissue engineering and, in implant dentistry, **229–244**

## S

- Salivary glands, gene therapy of, **157–173**  
 oral/gastrointestinal tract gene therapeutics and, 166–167  
 gene transfer to, clinical applications of, 158  
 following irradiation damage, 159–164  
 gene transfer vectors for, 158–159  
 general strategy for, 157–159  
 reasons for, 157  
 Sjögren's syndrome and, 162–164  
 protein secretion pathways in cells, 164–167  
 systemic gene therapeutics and, 167–168
- Scaffolds, bioengineered, for craniofacial bone tissue engineering, 184–186  
 biomaterials used as, 206–208  
 dental, as carrier for cells, 211  
 fabrication of, new technologies for, 210  
 materials for, 211  
 solid freeform fabrication of, 210  
 interactions of, and postnatal dental stem cells, 197–198
- Sjögren's syndrome, and gene transfer to salivary glands, 162–164
- Stem cell engineering, of biomimetic materials, 308–309
- Stem cell therapy, 307–308
- Stem cells, dental. See *Dental stem cells*.  
 pulp, adult, life cycle and activity of, 306  
 migration of, molecular regulation of, 306–307, 308  
 reparative dentin bridge and, 304  
 source of, 304–306

## T

- Ti-Ni alloys, superelasticity of, 236–237
- Tissue engineering, approaches to, 266  
 as approach to bioengineered teeth, 192–193, 194  
 cell-based, for periodontal tissue regeneration, 268–269  
 definition of, 205  
 for creation of replacement teeth, **299–315**  
 for periodontal tissue regeneration, 266–273  
 for periodontitis, new developments in, **265–276**  
 gene delivery-based, for periodontal tissue regeneration, 269–271  
 growth factor gene therapy for, evaluation of, 253  
 in restorative dental treatment, significance of, 311  
 of replacement teeth, 310  
 protein-based, for periodontal tissue regeneration, 266–268  
 research in, for tooth replacement, 240–241  
 strategy for, 205–206  
 teeth created by, harvesting of, 309–310  
 teeth of supporting tissues as target for, 271
- Titanium, commercially pure, as chemically biocompatible material, 236
- Tooth bud cells, bioengineered teeth from, **191–203**  
 populations of, characterization of, 194–196  
 enriched dental progenitor, generation of, 196
- Tooth (Teeth), bioengineered, current research goals in, 198–200  
 for repair and regeneration, prospects for, 191–193, 194  
 from tooth bud cells, **191–203**  
 omental implant method schematic for, 193  
 tissue engineering approach to, 192–193, 194  
 created by tissue engineering, harvesting of, 309–310  
 natural, movement of, by bone remodeling, 237–238  
 pulp-dentin complex of, histology of, 302  
 repair and regeneration of, bioactive molecules to stimulate, **277–298**  
 bone morphogenetic proteins in, 281

- calcium hydroxide in, 277, 279–280
- cell recruitment by osteoblast and odontoblast precursors for, 294–295
- extracellular matrix molecules in, 277–278, 282
- reparative dentin formation in, 280, 281
- replacement, creation of, tissue engineering strategies for, **299–315**
  - tissue engineering of, 310
- replacement of, tissue engineering research for, 240–241
- root formation, bioengineered, 199–200
